European Association of  
Aerial Surveying Industries

Reducing aerial survey carbon  
footprint

WEBINAIR 26/05/2023

## Why?

Save the planet.

Align Global Paris Agreement, EU Strategy, National efforts,...

Increase efficiency.

Public and Private Clients demands.

Regulation (e.g. Non Financial Information Disclosure).

...

The EU is leading the global climate fight even though it accounts for only 8% of global emissions. At the moment, it is the largest provider of global financing for the fight against climate change.

EUROPE

Regulatory  
Framework

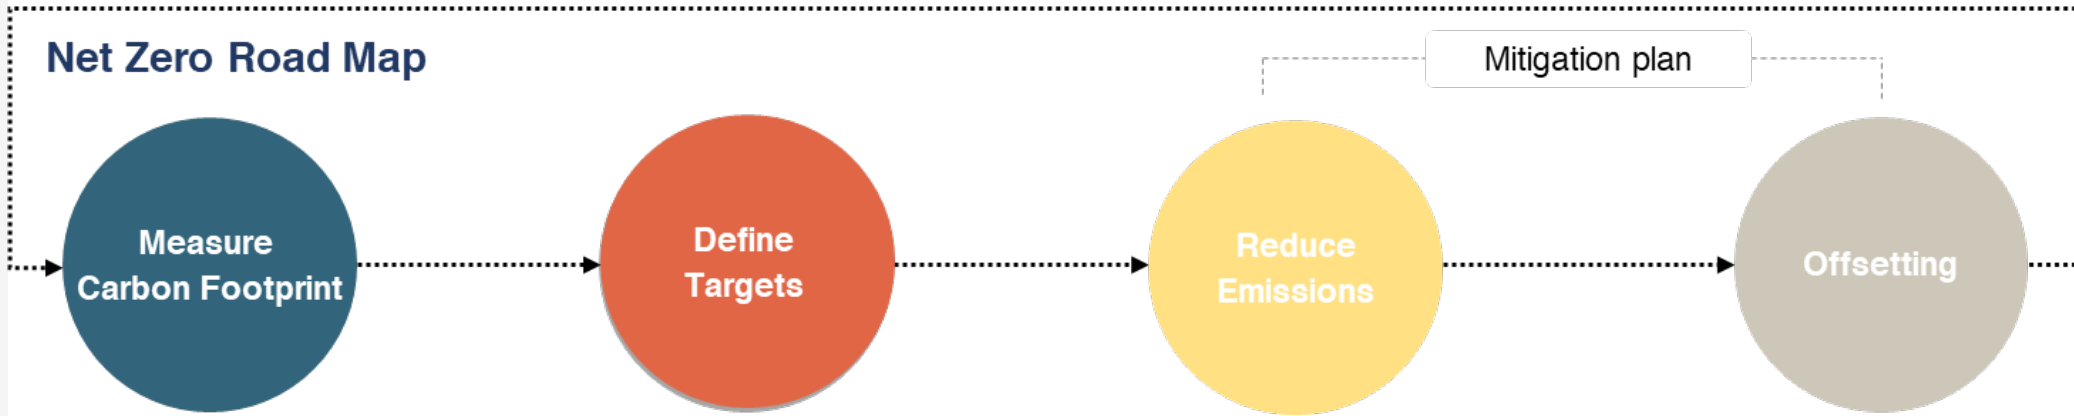

- 2005 European Emissions Trading Scheme (EU ETS).
- 2016 Ratification of the Paris Agreement 2019 European Green Deal, Decarbonization Strategy to 2050.
- 2021 Proposed European climate law, Fit for 55 program.
- EU RD 2019/2088 SFDR. Disclosure of sustainability information in financial services and technical standards developing it.
- RD EU 2020/852 Green taxonomy. Delegated Regulation 2021/852

Commitments

Climate neutrality target to 2050

- 2008. 20% reduction of emissions in 2020 vs. 2019.
- 2014. Reduction of at least 40% of emissions in 2030.
- 2020. Reduction of at least 55% of its emissions in 2030 vs. 1990 (fit for 55 program).
- Climate Neutrality 2050 (90% Reduction / 10% Neutralization)

How?

## Take away

- Very important to define a strategy to reduce the companies carbon footprint regardless of the size and of the company and main activities.
- There are different strategies. Define yours!
- Not difficult nor expensive if thought through.
- Very important to work together on the definition of an industry plan that will help companies to be more efficient and sustainable.
- Also important because you reduce the risk of regulatory surprises.
- Its here to stay: lead it or suffer it.
- Future regulations will affect the industry in terms of operational changes, financially and business development, especially, but not only when talking about public tenders and other regulatory compliance.
- Be ambitious, its a Good idea.

THANK YOU!!
